

DURALUM[®]

ALUMINUM EDGING

DESCRIPTION

Duralum[®] BRAND aluminum landscape edging is a rust-proof edging designed to be inserted into the ground for use in landscape areas requiring permanent and distinct separation of different materials. IE: To separate grass from mulch, pebble stone from mulch, paver bricks from walkway or grass, etc. Use Duralum[®] BRAND aluminum landscape edging to differentiate landscape beds from one another and to contain matter (ie: rocks, mulch, brick) in a defined area.

BASIC USES

Landscape edging as a border between planting beds, pathways, drives, mulch & rock division, or anywhere separation and definition is required.

SIZES & APPLICATIONS

1/8" Primarily used in residential and light commercial applications where greater flexibility is desired. Prolonged straight runs are possible but will require additional labor. Applications include, but are not limited to, planting beds, tree rings, paver walkways and paths.

3/16" Primarily used in commercial, industrial, institutional projects, and other high traffic areas. Straight runs are easier than with 1/8" material with only slightly reduced flexibility. Applications include, but are not limited to, driveways, asphalt, maintenance strips, running tracks, and pathways.

All sizes of edging to be packed as 800 lft pallets and available in 8' or 16' lengths.

DEPTH

Aluminum edging of either thickness (1/8" or 3/16") available in 4" or 5.5" depths.

AVAILABLE FINISHES

Mill finish constitutes a natural aluminum finish as found on extruded parts. Powder coated finish available in Green, Brown, Bronze & Black . Available in 1/8" x 4" size 1/8" x 5.5", 3/16" x 4" and 3/16" x 5.5", 8' or 16 lengths'.

STAKES

4" depth aluminum edging supplied with 11ga x 12" stakes. 5.5" depth edging supplied with 11ga x 14" stakes
